

Anatomy Clinic Science

The ongoing pandemic didn't progress our scientific development, leading to many promising projects to be left pending. However, things have started going back to normal, and our members have begun to take new initiatives to work on.

Our running projects

Paweł Iwaszkiewicz

Anatomia nerwu potylicznego większego

At this point, Paweł needs people who are willing to be examined through ultrasound, to move his work forward. He is trying to find the relationship between the anatomy of the nerve and the occurrence of migraines.

Dr. Sławomir Woźniak

Colon micro- and macroesophagisation in interposed pedicled colonic right half segments for eosophageal reconstruction

Dr. Woźniak is ambitiously fighting for the publication of his Scientific paper in “Gut” magazine.

Sara Czarnecka

Dodatkowe kości wystawne w czaszce i błędy w ich diagnostyce

Sara is regularly going through scientific papers.

Ivanka Lazarchuk

Jak palenie tytoniu wpływa na pęcherzyk żółciowy?

Ivanka will be conducting ultrasounds among smoking and non-smoking medical students

Ala Dankowska

Wpływ palenia na wielkość tarczycy

Ala glances through research papers related to the topic and practices ultrasound on volunteers.

Scientific conference

We would like to invite you kindly to take an active part in the scientific conference "Anatomical POV in clinical cases", which will be held in October 2022. Each person willing to participate will receive or choose a topic about which they prepare a short Powerpoint presentation. The entire conference will be held in English. More details will be presented in the near future!
